

AkyPak[®] Reuse

Reusable Boxes, Trays & Totes

Embrace Sustainability: Say Goodbye to Single-Use Packaging!

Take a decisive step toward sustainability by eliminating single-use packaging materials from your supply chain.

Choosing reusable packaging capable of 70 rotations not only saves money, but also positions your company as a leader in sustainable practices.

With the widest selection of reusable boxes, totes, trays, and hand-held containers in bespoke formats, CORPLEX is the ideal partner to assist you in your sustainable packaging journey.

Corplex offers deep packaging expertise and great ability to bring solutions to all our projects.

Jordi Moré
Grupo Embalex

Tailored Solutions for Diverse Industries:

Our world-class design team will create packaging that is specifically tailored to the unique needs of our clients.

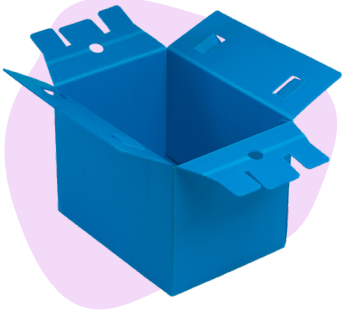

Our value proposition lies in the seamless fusion of innovative design and precision manufacturing, ensuring that each custom-made package aligns perfectly with your product specifications.

Customisation options include inner fittings to separate goods, surface printing, label holders, RFID tags, and QR codes.

Effortless Assembly, Optimal Space Usage:

AkyPak® Reuse packaging stands out because of its innovative collapsible design, which allows for efficient storage when not in use. With its exceptional moisture resistance and ease of cleaning between uses, our solution not only saves space but also ensures unrivalled durability and hygiene standards.

Knock-Down Packing Box

Knock Down (KD) Packing Boxes are a simple self-locking alternative to the FEFCO 0201 style box. They feature a flap closure system that eliminates the need for adhesive taping and a standard tamper-evident closure.

Slotted Box

Slotted Boxes provide a simple yet robust die-cut alternative to the FEFCO 0215 style box. Supplied flat packed in a single piece with pre-welded seam, **AkyPak®** Slotted Boxes feature a hinged style lid closure and “crash-lock” base for easy assembly.

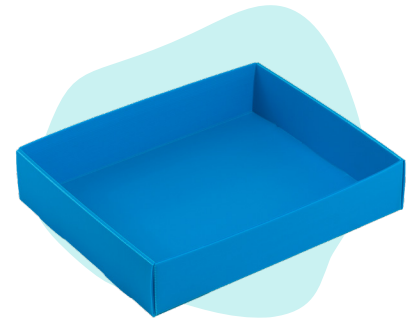

Nestable Tote Box

Strong, lightweight and stackable tote box, ideal for efficient line-side use and manual handling. Particularly suited to manufacturing sectors, tote boxes can be enhanced with inserts, dunnage, corner reinforcements and dividers.

Foldover tray

FOE Trays offer a strong and simple self-locking alternative to the FEFCO 0422 style tray. Reflecting a one-piece design with fold-over ends and locking tabs, **AkyPak®** FOE Trays have a strong, rigid outer rim and a flat, stable base to ensure stability on any surface.

Example of AkyPak® Reuse Applications

Carry Case

Reusable carry case to deliver parts and tools throughout our client's warehouse. Made to withstand up to 270 kg of pressure during 100+ uses. It assembles in seconds and lays flat for easy storage when empty.

e-Commerce Packaging

Reusable e-Commerce packaging is causing a storm! Good for +20 cycles of send-return-send again. Our sturdy e-commerce boxes and pouches fold to envelope-size for their return through mailboxes or designated drop-off locations.

CASE STUDY

AkyPak® Reuse Boxes, Trays & Totes

Flower Box

The perfect cardboard substitute to transport cut flowers internationally from the growers to DCs, and back to the growers for filling again.

Durable for 40+ trips and fully compatible with automated line handling. It features ventilation holes and is fully collapsible for optimised returned.

We've done a Life Cycle Assessment based on this box! Have a look to the results, scan (or click) the QR code below

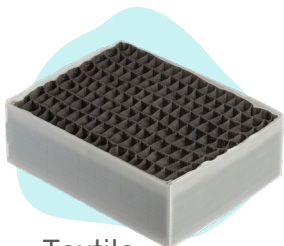

Protect & Organise your items with custom-designed Separators and Dividers

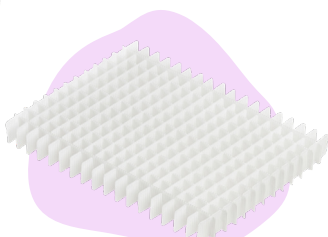

AkyPak® dividers and dunnages play a crucial role in minimising transit damage, addressing a common concern in the industry.

With a focus on custom design, they significantly contribute to lowering the damage rate for in-transit goods, potentially eliminating the issue altogether.

Commit to a **Circular Economy** with the **Plastics Recovery Program**

Our program creates a win-win partnership with our customers, allowing you to:

- > Improve your sustainability efforts
- > Reduce your plastic waste
- > Save money on disposal fees
- > Free up warehouse space
- > Get paid for your plastic waste

How does it work?

In short, the program consists of 4 key steps which are:

1. We ship our products to you to be used and **reused**.
2. At the end of their life, you return them to us.
3. We recycle and repurpose them into new goods.
4. We pay you for the goods that were returned to us.

Do you think Cardboard has a **lower environmental footprint** than Plastic?

Think again!

Our **Life Cycle Analysis** dispels the myth of Plastics being an unsustainable packaging material.
